Mda-5 contains a caspase recruitment domain (CARD) and a RNA helicase motif. Mda-5 is a novel interferon (IFN) inducible gene with structural similarities to RNA helicases and CARD motif containing proteins. Mda-5 is induced during terminal differentiation in human melanoma cells treated with the combination of recombinant fibroblast iFN and the antileukaemic compound mezerein (MEZ). Mda-5 is useful or identifying compounds that may induce its expression. Mda-5 is useful or identifying cancer e.g., melanoma, neuroblastoma, astrocytoma, glichlastoma multiforme, cervical cancer, breast cancer, colon cancer, prostate cancer, osteosarcoma, chrondosarcoma and especially where the cancer is a cancer of the central nervous system and apoptosis. The Mda-5 promoter exhibits melanocyte tissue specificity and minimises systemic toxicity.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Nucleic acid sequences encoding a Melanoma Differentiation Associated Gene useful for cancer cell growth suppression, apopto as and

RH116 is a 116kDa protein and has homology to RNA helicases (DEXH lox). RH116 and its coding sequence are useful for treating cancer; actually or chronic infections (especially by HIV or hepatitis B or C); inderited genetic diseases; (auto)immune diseases (particularly rheumatism, arthritis, arterioscierosis, osteoporosis and diabetes, but many 'thers listed) and to prevent graft rejection. RH116 and its coding sequence are also useful for inducing, or increasing, the immune response to a laccine.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              New polypeptide, useful for treating and diagnosing called or inflammation, and drug screening, comprises a human polymucleotide homologous to RNA helicase.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Sequence 3372 BP; 1157 A; 637 C; 748 G; 830 T; 0 other;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              melanoma differentiation associated gene-5 (Mda-5) pol, peptide. Mda-5 (Contains a caspase recruitment domain (CARD) and a RNA helicase motif. CC Mda-5 is a novel interferon (IFN) inducible gene with -inuctural CC similarities to RNA helicases and CARD motif containin: proteins. Mda-5 (CC is induced during terminal differentiation in human melanoma cells created with the combination of recombinant fibroblast FN and the CC antileukaemic compound mezerein (MEZ). Mda-5 is useful for treating CC cancer e.g., melanoma, neuroblastoma, astrocytoma, glivilastoma CC cancer e.g., melanoma, neuroblastoma, astrocytoma, glivilastoma CC cancer of the central nervous system and especially while the cancer is CC acacer, osteosarcoma, chrondosarcoma and especially while the cancer is CC acacer of the central nervous system and apoptosis. The Mda-5 promoter CC arithits melanocyte tissue specificity and minimises systemic toxicity. The present sequence is human Mda-5 protein-related DN: CC Note: The present sequence is designated SEQ ID NO:2 in the main body of the specification (AAED)015). The present sequence is not further referred to in the sequence designated SEQ ID NO:2 in a protein format in the sequence listing.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Best Local Similarity Matches 3129; Conserv

        The present invention relates to the isolation of novel human enzyme polypeptides (AAU22915-AAU23814), and the cDNA and genomic sequences encoding them. The enzyme polypeptides of the invention may comprise the functional classes of oxidoreductases, transferases, hydrolases, lyases, isomerases or ligases. The sequences of the invention are useful in the diagnosis, treatment, prevention and/or prognosis of a wide range of disorders including hyperproliferative disorders (e.g. cancer), immunodeficiency disorders (e.g. AIDS) autoimmune disorders (e.g. arthritis), neurological disorders (e.g. Alzheimer's disease), metabolic disorders (e.g. phenylketonuria), inflammatory disorders (e.g. asthma), cardiovascular disorders (e.g. atherosclerosis),
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         17-NOV-2000

The polynucleotides of the invention can also be used in gene therapy. AAS40785-AAS41684 represent cDNA sequences encoding for the novel human enzyme polypeptides of the invention. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences. Sequence 1967 BP; 723 A; 344 C; 416 G; 476 T; 8 other; Query Match Best Local Similarity 98.5%; Pred.                                                                                                                                                                                system, such as peripheral nervous injuries, peripheral neuropathy and localised neuropathies and central nervous system diseases, such as Alzheimer's, Parkinson's disease, Huntington's disease, amyotrophic lateral scierosis, and Shy-Drager Syndrome. Other uses include the utilisation of the activities such as: Immune system suppression, Activinyinhibin activity, chemotactic/chemokinetic activity, haemostatic and thrombolytic activity, cancer diagnosis and therapy, drug screening, assays for receptor activity, arthritis and inflammation, leukaemias and C.N.S disorders.
                                                                                                                                                                                                                                                                                                                                                               The invention relates to human nucleic acids (AAI57798://AI61369) and the encoded polypeptides (AAM38642-AAM42213) with nootheric, immunosuppressant and cytostatic activity. The polypunchoutides are useful in gene therapy. A composition containing a polypeptide or polypucleotide of the invention may be used to treat diseases of the coripheral nervous
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Tang

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       g
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                immunosuppressive; immunostimulatory; antirheumatic; a riarthritic; antiinflammatory; cancer; infection; HIV; hematitic anticimanno distributions and inferimental distributions and inferimental distributions are anticimanno distributions.
The present invention relates to human RH116 (see AAM17798). RH116 is a 116kDa protein and has homology to RNA helicases (DEXH tox). RH116 and its coding sequence are useful for treating cancer; acree or chronic infections (especially by HIV or hepatitis B or C); inferited genetic diseases; (auto)immune diseases (particularly rheumatism, arthritis, arthritis, arthritis, arthritis, arthricism, archively and arteriosclerosis, osteoporosis and diabetes, but many there listed) are
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          1501
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 1261

the encoded polypeptides (AAM38642-AAM42213) with mootropic, immunosuppressant and cytostatic activity. The polynucleotides are useful in gene therapy. A composition containing a polypeptide or polynucleotide of the invention may be used to treat disease of the pelipheral nervous system, such as peripheral nervous injuries, peripheral nuropaths and localised neuropathies and central nervous system disease, such as Alzheimer's, Parkinson's disease, Huntington's disease, such as Alzheimer's, Parkinson's disease, Huntington's disease, amyotrophic lateral sclerosis, and Shy-Drager Syndrome. Other uses include the utilisation of the activities such as: Immune system suppression, Activinyinhibin activity, chemotactic/chemokinetic activity, haemostatic and thrombolytic activity, cancer diagnosis and therapy, orng screening, assays for receptor activity, arthritis and inflammation. RH116 and its coding sequence are useful for treating cancer; acute or chronic infections (especially by HIV or hepatitis B or C); inherited genetic diseases; (auto)immune diseases (particularly rheumatism, arthritis, arteriosclerosis, osteoporosis and diabetes, but many others listed) and to prevent graft rejection. RH116 and its coding sequence are also useful for inducing, or increasing, the immune response to a vaccine. The present sequence was used in an example from the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              11-MAY-2000;

determining the presence of or predisposition to a diseas associated with altered levels of IFN polypeptide or polynucleotide. HIN nucleic acids, polypeptides and antibodies are useful for diagnosis, prevention or treatment of variety of immunological and cell proliferative disorders, such as autoimmune diseases e.g. lupus erythematosus, immunodeficiency diseases such as acquired immunodeficiency syndrome (AIDS), graft rejection, viral infections including hepatitis and human immunodeficiency virus (HIV), immune mediated glomeruloncy bitis, haematologic diseases such as applastic anaemia and chronic autoropenia and cancer. In addition they are also useful for treating addition they are also useful death, including analysis and interest properties and the provention of the provincial diseases.
                                                                                        Infarction, stroke, neurological diseases including Alzheimer's and Parkinson's diseases, amyotrophic lateral sclerosis and spinal muscular atrophy. IFN nucleic acids and polypeptides are also useful for identifying interferon-like proteins and interferon agonists, for screening drugs and compounds which inhibit or enhance IFN activity or function and as targets for the identification of small nedecules that are immunostimulatory, immunosuppressive, or stimulate or suppress norm
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Claim 9; Page 29-32; 134pp; English

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      disorders, such as autoimmune diseases e.g. lupus erythematosus, immunodeficiency diseases such as acquired immunodeficiency syndrome (AIDS), graft rejection, viral infections including hepartits and human immunodeficiency virus (HIV), immune-mediated glomerulone) h: itis, considered diseases such as aplastic anaemia and chronic neutropaenia and cancer. In addition they are also useful for treating at diagnosing various disorders associated with cell death, including myocardial infarction, stroke, neurological diseases including Alzheimer's and Parkinson's diseases, amyotrophic lateral sclerosis and spinal muscular atrophy. IFN nucleic acids and polypeptides are also useful for dentifying interferon-like proteins and interferon agouists, for screening drugs and compounds which inhibit or enhance IFA activity or function and as targets for the identification of small nuclecules that are immunostimulatory, immunosppressive, or stimulate or suppress normal
                                                                                                                                                                                                                                                                                                                                                                                                                    Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The sequence represents interferon induced nucleic acid, 1445. IFN nucleic acids and polypeptides are useful for treating or preventing a pathology associated with IFN polypeptide in a human. They are useful for determining the presence of or predisposition to a diseas, associated with altered levels of IFN polypeptide or polynucleotide. HEN nucleic acids, polypeptides and antibodies are useful for diagnosis, prevention or treatment of variety of immunological and cell prolificative
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            (CURA-)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Claim 9;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              New interferon induced polypeptides and polynucleotides, useful for the diagnosis, prevention and treatment of immunological, cell proliferative disorders, such as lupus erythematosus, camers, stroke and Alzheimer's disease
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           and Alzheimer's disease

                                                                                                                                                                                                                                                                                                                                                                                                                        9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             (II) (II) is useful for generating antibodies against it, retecting or control of the polyment. (II) and its binding partners are useful in medical imaging of sites expressing (II). (I) and (II) are useful in medical control of sites expressing (II). (I) and (II) are useful for treating control of sites expressing (II). (I) and (II) are useful for treating control of sites expressing (II). (I) and (II) are useful for treating control of sites expressing or biological activity. The polymentide and polymucleotide sequences have applications in control of control of sequences of data and products to assess biodiversity cand to produce other types of data and products dependent on DNA and control of sequences. AAS64197-AAS94564 represent novel human control of the sequences of the invention.

Note: The sequence data for this patent did not appear in the printed specification, but was obtained in electronic format directly from WIPO at fifth wipo.int/pub/published_pct_sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                              Query Match

nucleic acids and polypeptides are useful for treating or preventing a pathology associated with IFN polypeptide in a human. They are useful for determining the presence of or predisposition to a discase associated with altered levels of IFN polypeptide or polynucleotice. IFN nucleic acids, polypeptides and antibodies are useful for diagnosis, prevention or treatment of variety of immunological and cell proliferative
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Interferon induced nucleic acid; autoimmune disease; lipus erythematosus; immunodeficiency; stroke; acquired immunodeficiency syndrome; AIDS; graft rejection; viral infection; hepatitis; aplastic shaemia; cancer; human immunodeficiency virus; HIV; immune-mediated glomerulonephritis; haematologic disease; chronic neutropenia; myocardial infarction; neurological disease; Alzheimer's disease; Farkinson's disease; tumour; amyotrophic lateral sclerosis; spinal muscular atrophy: human; IFN7; ds.

N and P may be used in the prevention, diagnosis and treatment of diseases associated with inspropriate P expression. For example, N and P may be used to treat a sorders associated with decreased expression by rectifying mutitions or deletions in a patient's genome that affect the activity of P by expressing inactive proteins or to supplement the patients own production of P. Additionally, N may be used to produce the colon cancer associated Ps, by inserting the nucleic acids into a host cell and culturing the cell to express the proteins. N and P can be used in the prevention, diagnosis and treatment of colorectal carcinomas and cancers. Analy 196 to AAH37204 and AAB7789 represent sequences used in the exemplification of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                  present invention.
